Regular Session of Town Council on Monday Last

Unemployed Asked For Increase of Relief Amount

There was a full attendance of town councillors at the regular meeting last Monday evening. Although there was very little to report as most of the time was taken up with ordinary matters for the end of the year.

Representatives of the unemployed association were present at the meeting and presented a letter which asked for an increase of relief amounts to the unemployed.

Council decided the increase could not be allowed until they received instructions from the Bureau of Relief and Public Welfare. The Mayor, Councillor Rindahl and Solicitor Baird were appointed a committee to settle the claim for the new town pump.

Council took considerable time in discussion of the financial conditions in connection with the bond holders and finally decided to make a proposition to submit to the Utilities Commission Mr. Allison waited on council and requested for a donation to increase amount of funds now on hand from entertainments, for the ready. Each councillor donated \$2.00 out of their own pockets.

The provincial health inspector sent a report to council after he had inspected all business sections of the town and stated all stores, restaurants, hotel, bake shop and milk dairy were in a satisfactory condition.

Accounts were approved by finance committee and motion was passed for payment. Several applications for relief were applied to council. The applications were approved.

The secretary was instructed to make arrangements for first insurance on the Broadway Store building which is now used for a government school.

The water committee was given power to act in connection with repairs to the pump station. A number of collectable town accounts were written off.

Yeggmen once again swarmed on Cayley at an early hour yesterday and made off with a sum of money belonging to the municipal district. This is the fourth time in recent months.

Newly Elected Officers For Canadian Legion

Meeting Took Place Sunday At Club Rooms

Election of officers for the local Legion took place last Sunday afternoon.

Very little other business took place and after the vote the following officers were declared elected: President — W. Hill; Vice Pres — Joe Podesta; Com. — A. G. Osmond, B. Allison, R. McKinnon, F. Jones and W. Yates.

Chairman of the Social Committee W. Palmer.

Election of the Secretary will take place at the first meeting of the newly elected officials. A vote of thanks was tendered to the retiring officers.

Chamber of Commerce Work With The Hat

Local Members Appointed on the Medicine Hat Committee

At a meeting held Monday night in Medicine Hat, members of the Medicine Hat Chamber of Commerce the various service clubs of Medicine Hat and the Redcliff Chamber of Commerce launched a drive to bring to the Redcliff-Rosaline irrigation scheme. Plans have been made to bring the practicability and necessity of this scheme to the attention of both provincial and Dominion governments and the country as a whole. Any person interested in this scheme should get in touch with the secretary of the Medicine Hat or of the Redcliff Chamber of Commerce.

At this meeting the following members of the Redcliff Chamber were appointed on committees to work in conjunction with the Hat Chambers Committees. Beneficiaries: C. T. Hall, and W. S. Henry and H. Wesley of Bowell Publicity; D. R. Broadfoot and E. L. Stone.

It was suggested that the committee on Benefits might consider the following sub-heads when compiling their report: Agricultural Advantages. Schools and Churches, rehabilitation of the individual, stock watering taxation, relief etc.

Mayor Bullman of Medicine Hat was re-elected in the election last Monday. All the old officers were also returned to the council.

School Literary News

An exceptionally fine program took place in the school auditorium, Friday December 10th. The editor in chief first read the paper, "The Redcliff School Literary Gleaner."

Doreen Cooke then favored the audience with a piano solo. The last part of the program was the long awaited play by the Grade X Dramatic class, Denison's "The Weather Breeder."

The characters were well portrayed by the following:

Liz (the heroine) Gene Halliday; Jim (the hero) Lynn Ellis; Mr. Hawley (Liz's father) John Walton.

Mr. (the costumer) Dolores Fuchholz; Mrs. (farm hand) Hilda Humphrey.

The number of visitors who attended the Lit. meeting thoroughly enjoyed the whole performance. On Friday, Dec 17th at 8:00 p.m. there will be another play put on by the Grade IX Dramatic class "A Night at an Inn." All visitors are cordially welcome. Admission Free.

Ladies' Aid Sale Was Well Patronized

Ladies Wish To Thank All Those Who Helped

A good crowd, notwithstanding the cold and windy condition of the weather, patronized the annual sale of work home baking and tea held under the auspices of the Gordon Memorial Church Wednesday and a nice sum was realized.

The ladies desire to thank all who helped them in their worthy efforts.

To Distribute Funds From Sunday Concerts

Committee Will Submit List of Those in Need

The total cash obtained by the Sunday Evening Concert Committee will be announced next Monday Dec 20.

A committee will submit a list of those most in need. Those families will be first considered. Distribution will take place at the homes of those recommended by the committee on Wednesday evening between the hours of 6 p.m. and 9 p.m. December 22nd.

How Is Your Subscription?

Christmas Carol Next Sunday A.M. by Junior Choir. Gordon Memorial will hold the following service in celebration of the Christmas Festival. Sunday Dec 19th 11:15 a.m. Carols and sermons with special Christmas Music by the Junior Choir. 7:30 P.M. Christmas Service. Selections suitable for the occasion by the Senior Choir. Christmas day Dec 25th Short bright service at 11 a.m. Sunday Dec 26th continued Christmas Services 11:15 a.m. Inspiring Christmas music. Christmas message 7:30 p.m. Evening word led conducted by the Y.P.U. no sermon. Dramatization of Christmas story by Young People. Christmas music by the Senior Choir. Guest soloist Miss Joan Watson.

Local Youth's Training School Well Under Way

Inspector Well Satisfied With Redcliff Progress

Mr. J. H. Rice, of Calgary Director of Youth Training School expressed himself as very well satisfied with the Redcliff Centre on his visit here early this week.

The training under Mr. Todd and Mr. Smith is well under way and the health and first aid class as under the supervision of Dr. Ward have started.

Visitors are welcome to the school. You will be surprised and pleased at the enthusiasm and aptitude of our boys.

Local Bible Society Completes Collection

Thanks To The Canvassers

The annual canvass for the Canadian Bible Society has been completed for 1937. The officers of Redcliff Branch of C. B. S. take this opportunity through the local press of thanking all who have more supported the society and the collectors who so faithfully did their part.

Thirty dollars and twenty five cents were collected.

Mrs. J. Stratten, \$6.60; Misses A. Bolton & A. Buchholz, \$5.45; M. Broughton, L. Leming & R. P. P. \$10.45; Mrs. Bamforth & Mrs. Henry \$3.60; Mrs. Leppart & Mrs. K. Johnson \$4.15. Total \$30.25.

Rev. A. A. Lytle of the Bible House Calgary District Secretary for the C. B. S. also adds his thanks to the collectors and canvassers for the amount received.

Respectfully Submitted, Elma W. Cans.

See Press for Redcliff Branch.

Elect New Alberta Whatat Pool Chairman

Mr. L. Hutchison Follows Dr. H. W. Wood

Low Hutchison of Duhamel was elected chairman of the Whatat Pool, Tuesday, December 14th in succession to Dr. H. W. Wood, retired.

Mr. Hutchison has been Vice-director for the Canrose district since the Pool was formed in 1932.

An Englishman by birth, Mr. Hutchison has run the gamut of farming experience in both Western United States and Canada for about half a century. A farmer in Iowa, a student at the University of Michigan, a cowboy in western Nebraska and a homesteader in Alberta, the chairman has had a varied and interesting life. He still lives on his homestead at Duhamel.

Mr. Hutchison was born at Selk, Yorkshire in 1870 where his father and grandfather were cheese and flax merchants.

During the evening the drawing was made for a Christmas cake made by Mrs. Rosier of the hotel dining room, and was won by John Greisack. The cost of the cake brought in \$7.00 and added to the entertainment committee. The collection at the door amounted to \$9.92.

Chairman E. L. Stone, presided at the auction of the joint service in Gordon Memorial church next Sunday evening, after the regular evening service. It is possible there will be another entertainment in the Armories sometime before Christmas.

Sunday Concert Well Attended After Service

Program Was Put On By Local Talent

Last Sunday evening the local Armories were filled again for the concert which have been arranged by Messrs B. Allison and W. Swanson for the purpose of collecting funds to distribute Christmas gifts to the needy.

The program was put on by local talent and was enjoyed by all those present.

Ralph Willis gave an appropriate Christmas recitation and Joan Palmer gave a solo so nicely that it demanded an encore. Messrs Ed Beizer and Arnold Harbort who have rendered at several concerts, accompanied by guitars, well pleased the audience as usual and gave two selections. Doreen Fitzhenry and Evelyn Waters gave an amusing skit in a very capable manner. Mr. E. T. Cooke rendered a violin selection which demanded an encore and was accompanied by his daughter. Mr. J. Hitchen gave a solo and was followed by Mrs. Stone who gave a talk on "The Christmas Carol," written by Dickens.

Mrs. T. Palmer sang a nice "Softly and Gently" which was well received, and was accompanied by Miss Sellhorn. The program was brought to a close by a quartette by Mrs. Stone, Miss Kane, Mr. J. Hitchen and Mr. E. L. Stone, accompanied by Mrs. W. Campbell, after which the audience rose for the National Anthem.

During the evening the drawing was made for a Christmas cake made by Mrs. Rosier of the hotel dining room, and was won by John Greisack. The cost of the cake brought in \$7.00 and added to the entertainment committee. The collection at the door amounted to \$9.92.

Chairman E. L. Stone, presided at the auction of the joint service in Gordon Memorial church next Sunday evening, after the regular evening service. It is possible there will be another entertainment in the Armories sometime before Christmas.

Mr. Hutchison joined the "Whatat Pool" last night. He was chosen as a director on the provincial board in 1923 and then was elected to the permanent board when it was formed later. He has been member of the board since.

Resources For Western Benefit

The petroleum industry in Western Canada has been making great forward strides in the past few months and these recent developments indicate that the time may not be far distant when American sources of supply of crude will be shut off altogether and the entire consumption requirements of all the prairie provinces be furnished from Western Canadian wells.

Such consummation of the aspirations of producers in what is at present the largest Western Canadian crude oil field, Turner Valley in Alberta, is not only highly desirable, but undoubtedly can be achieved in the very near future, provided producers, consumers, refining organizations, both privately and co-operatively, and transportation companies, without any differences there may be between all or any of them and work together as a unit for the achievement of this objective.

There is no longer any doubt as to the capacity of the Turner Valley field to supply all Western Canadian requirements. As a source of supply of crude oil of excellent quality for possibly many years to come Turner Valley is a proven field and is not only able to supply all consumer demands in the prairie provinces but probably contains reserves sufficient to supply other markets as well. The oil is there. The market is here. All that is required is to make it economically feasible for the west to connect, and that means at cheap transportation as can be provided without loss to the carriers.

A Move To Make

Some steps in this direction have already been taken by a reduction in railway rates on trainload basis between the Turner Valley field and Regina, Saskatoon, where a number of refineries are located. As a result Imperial Oil Ltd. have announced their intention of expanding their already large plant in Regina, providing for a substantially increased number of employees. Smaller independent and co-operative refineries in the same city have also announced their intention of expanding their plants, where they are permitted to share in reduced transportation charges by a reduction in carlot rates comparable with the lowered trainload rates.

The owners of the large privately-owned refining plant have announced that they are now preparing the application of the smaller concerns for reduced freight rates on carlot basis, but railway officials appearing before the Board of Railway Commissioners conducted representations for such relief on. Arguments on both sides were presented and the matter was left in the hands of the Railway Board for a decision.

Pipeline Chapter

From the viewpoint of both producer and consumer, however, chief interest must have centered in the undagued announcement by transportation company representatives that trainload rates were reduced to meet the needs of the proposed construction of a pipeline to carry the crude oil from the field near Calgary to Regina, and the further admission that oil could be conveyed by this method more cheaply than by rail even under the reduced trainload rate, available in practice only to the large concern.

By agreement between the producing companies, production at the wells has been curtailed to 25 per cent. of capacity down to their present level, which requires a much larger market than economic restrictions at present permit.

What Might Be Done

This dual situation at the source of supply and at the smaller refinery, coupled with the information revealed at the hearing before the Board of Railway Commissioners, provides the feasibility of some of the producers and the independent and co-operative refineries joining forces to finance a pipeline, unless some reasonable freight rate concession is granted the latter.

The statement that crude can be carried more cheaply through a pipeline than by rail under lowered trainload rates seems to give a cue to the course that might be adopted by the smaller companies, if sufficient volume could be secured to make such a project economically sound.

It is to be hoped, however, that some allowance will be made to place the smaller refiners on a more competitive basis and that such concessions can be made not only applicable to consignments to Regina but to all points in the prairie provinces where refineries are located. Such policy would ensure that all crude oil traffic available would be enjoyed by the railways and would undoubtedly result in material expansion in volume in the future, a result which should mean to the benefit of the transportation companies in the long run as well as to producers, the small refiners and the consumers.

Economic Balance Needed

From Saskatchewan alone it is estimated that not less than \$10,000 a day has been finding its way into the treasury of producers on the other side of the international boundary and American railways. Anything that can be done to divert this to the advantage of Western Canadian oil producers and the Canadian railways should also benefit the taxpayers and consumers of this country.

It has often been said, and with truth, that western economic life is not well balanced. Any steps which can be taken to develop western resources for western consumption, as well as other markets for any surplus, is a step in the direction of providing for a better economic balance.

Objects To Publicity

The first legal case of its kind in legal history according to experts, a man serving the seventh year of a 20-year sentence for the murder of a Federal agent, has started a battle against a radio company to prevent the "dramatization" of his crime career over the radio in Chicago.

There are more than 30,000 lakes in Florida.

Plane For King George

Was Expectantly Constructed And Will Carry Four Passengers
Emulating his royal ancestor, with their specially built carriage for their pleasure for the service of state, King George VI, an aviation enthusiast like his brother, the Duke of Windsor, now has a monoplane constructed especially for him.

Although the King, who was once a group captain in the British Royal Air Force, has already flown in the new monoplane, details of its construction have just been revealed by the Society of British Aircraft Constructors, Ltd. The airplane is a low-wing craft built largely of wood and is powered by two Daimler Chevrolet 12, radial air-cooled engines of 100 horsepower.

In general, the royal airplane is similar to the standard British Airspeed Envoy transport monoplane, being 35. However, it has many luxurious accommodations not found on the standard Envoy, including armchairs seats for four passengers. Each of the seats is fitted with its own table, which has tumbler holders and ash trays.

Room has been made on the royal airplane for a steward, and the refreshment cabinet in his charge is located in the rear of the passenger compartment. There is also space for the fitting of an occasional fifth passenger seat by the fuselage door.

Room has been made for the cockpit from the cabin. The Air Council, which placed the order for the royal airplane, decided that radio equipment and a place for a radio operator should be located just behind the cockpit. The range of the radio was necessary to shift the forward bulkhead about nine inches.

The cabin is furnished with thick velvet curtains over its doorway and the deaden the propeller noise. Fuel tanks from the engines cannot enter the cabin.

The plane has a retractable undercarriage which reduces air resistance to a minimum. The maximum speed is to cruise easily at 100 miles an hour. The maximum speed level is 120 miles an hour and the range is 600 miles in still air.

Chinese Show Heroism

Even If They Do Accept Death With Inevitable Calm

The stand of the "doomed lads" of Changai, the 150 Chinese who refused to lay down their arms and go safely into the British re-education camp, is an example of that supreme heroism which only great courage can produce.

But it also produces epic bravery. This and the thousands of Chinese who have been taken into custody by the British are a source of pride and honor to the Chinese people. It is a favorite belief of the West that the Orientals are permeated by his philosophy to accept death with laudable calm. This does not make the decision of the lads of Changai any less heroic.

The bravery of this handful of men will always rank as one of the great stories in the history of the world. The bravery of this handful of men will always rank as one of the great stories in the history of the world.

List Of Best Sellers

Statistics kept at McGill Show Development Book Leads

Statistics concerning "best-sellers" on this continent are kept on file in the McGill University library school in Montreal. A list of 65 "best-sellers," each of which sold 500,000 copies or more between 1975 and 1982, is headed by the well-known book, "In His Steps" written in 1909 by Charles Mowbray Sherrill.

Another best-seller is "The Great Western Railway" by a Frenchman, "Frederick" selling 2,000,000 copies and "Gri of the Amazon" 1,700,000. "The Book" by E. H. Hull has a sale of 1,946,000. Low Wallace's "Ben Hur" sold 1,900,000 copies.

Mark Twain's "Tom Sawyer" had a sale of 1,800,000 copies, a number equaled by "The Call of the Wild," by Jack London, reached a sale of 1,454,000 copies. "The Story of the Miller" by Jane Lyman Burdett sold 1,321,000 copies.

Rochester Short Of Nurses

Government Barring Of Canadian Criticism By Hospital

A U.S. government rule barring Canadian nurses from taking up temporary residence in the United States brought criticism from the Canadian Nurses Association, which is active in Strong Memorial hospital, Rochester, N.Y. Charging a dearth of nurses there and in other border cities, Miss Denison said hospitals may be forced to turn away patients because of the rule.

One Line Started Career

Canadian Born Opera Star

Chances During World War

"The Great War gave Margaret

Baneraman, Canadian-born opera

star of "Three Waltons" her chance

on the stage.

The beautiful blonde who has just

made her American debut at the

Boston opera house received the

story of her success as she returned

between acts of the musical extravaganza.

Miss Baneraman is a native of

Toronto.

Her parents were living in war

years in Poland, and she was

one of activities for the Canadian

troops and their families. Everyone

was doing war work and being

young and beautiful she

volunteered to sing at one of the

entertainments for the soldiers. This

concert was really the beginning of

her theatrical career.

Her song impressed Producer Paul

Benjamin, who was sent to Tokyo

Raynor, then selecting players for a

musical comedy. During the second

year of rehearsal, the stage man-

agement called out:

"Come here, Canada! Try reading

this."

In spite of all her nervousness,

she managed it well. She said:

"Here comes Tim!" in a voice that

was loud enough to be heard across

the footlights.

Having covered herself with glory

thus far, they gave her the role of

which was to be sung, and Margaret

Baneraman has been singing and

speaking since then, and her Do-

minos stages ever since.

The Wings Of Desperation

The Case Of Brazil And The New

Regime

Devotion to Brazil itself will have to

whether the new regime is to be

regarded merely as another dictatorship

of a familiar pattern or as an

entirely new type of government.

Worldwide, it seems clear that

it owes its existence in large measure

to the economic depression which

has been heavy and its

external bonds have been frequently

in default.

Once more we have an illustration

of the fact that dictatorship, whether

old-style or new-style, is never the

choice of a contented people. It

comes into power on the wings of

desperation.—New York Times.

CO-EDS LEAD JAPANESE BOYCOTT

Advocate A Wheat Institute To Conduct Researches In Uses Of Canadian Wheat

Formation of a wheat institute to conduct research in use of Canadian wheat, explore markets and arrange for publicity and advertising was urged upon the royal grain inquiry commission by Henry J. Griffin, director of the research department of United Grain Growers, Limited, and supported by George S. Matheson of the Winnipeg Grain Exchange.

Mr. Griffin was examined by John Brookes, counsel for the Grain Growers, and submitted a brief outlining the wheat institute proposal which was first advanced in another form in 1934.

Primary purpose of the institute would be to increase Canada's export trade in wheat, Mr. Griffin said. That involved direct effort, to interest consumers, farmers, millers and other processors, to make Canadian wheat and wheat products.

Among the functions proposed for the institute were:

Presenting information at present available bearing on the disposal of Canadian wheat;

Commercial and economic research concerning markets for Canadian wheat;

Assistance in formulating the wheat policy of the country, for producers and federal and provincial governments;

Study of trade relations affecting wheat;

Direct advertising and merchandising work on behalf of Canadian wheat and its products.

A start had been made on some of this work by the Canadian wheat board, Mr. Griffin said, and if the board continued in existence it should handle the whole thing.

He had heard of a similar institute in the United States, and if the board continued in existence it should handle the whole thing.

He believed it would be possible to support the work by financial contributions from the grain companies, transportation companies, elevator companies and other benefiting interests without direct government assistance.

Later on as the institute's work expanded it would provide a very large part of the cost, Mr. Griffin said, but the institute would be justified in the long run.

Had there been continuous study of the factors relating to wheat marketing in the past some of the problems which had arisen and were still confronting the country might have been solved, said Mr. Griffin.

For example, he said arrangements might have been made whereby certain European countries would have been best on encouraging domestic production could have been shown the advantage of taking a certain amount of Canadian wheat for export, making without interfering with their domestic policies.

Research on the use of Canadian wheat in blending with other wheats should be conducted abroad rather than in Canada, from which wheat was attached to rye bread, but it could be shown the quality of their rye bread would improve if flour from Canadian wheat were mixed with their rye flour.

Banks supporting the institute proposed Mr. Matheson suggested appointment of special grain commissioners in Europe and the Orient to push the sale of Canadian wheat. They would be men of long experience in the grain trade but not sales agents.

Famous Memory Expert

Information Given By Helen To People All Over World

People from all parts of the world will write to "Daisy," famous memory expert, for facts of out-of-the-way events which have never been recorded in books of statistics. There are also many who make long-distance telephone calls when they want to settle an argument, then and there. One recent letter came from Lord Tweedmouth, Governor-General of Canada, who has a great admiration for the man who can tell you the color of the hair of the engine driver involved in some obscure railway accident more than half a century ago, says a writer in the Daily British. Lord Tweedmouth extended a very hearty invitation to "Daisy" to visit him at Government House, Ottawa.

A platinum wire has been made with a diameter of only one-thirty-thousandth of an inch.

An elephant's trunk contains about 40,000 muscles.

Dog Eats Berries

Also Shows Other Delicacies, Which Makes It Unique

The other day a brief item crept into the papers about a dog in Mount Carroll, Ill., named Rocco. Sport has developed an appetite for raspberries and obviously the story was sent out on the theory that, when a dog, bites a raspberry it's news.

We confess that this tribute to Rocco caused a faint twinge of jealousy. This column is the proud possessor of a wire-haired, wiry little dog named Gogo among its story, unknown to news and uncelebrated over the news ticker, who, nevertheless, eats raspberries, grapes, blueberries and blackberries.

In fact, she is an authentic berry eater. During the summer season, up in New Hampshire's hills on berrying expeditions, she will stop at the blueberry patch and eat up the bushes if she isn't persuaded to act merely as a pointer.

A berry diet by no means has any asceticism, or, at all events, as the case may be. She is fond of corn, cantaloupe, pumpkins, peas, leeks and peas, and she likes grapes, which she has to be poked. Indeed, she eats almost anything which is offered her, and she is a gourmet, in that she shares a gourmet's

appetite for a very small little dog, as dogs go, she stoutly refuses to touch alcoholic beverages though she will guzzle a spoonful of beer under the misapprehension that it was soup.—New York Times.

Fruit Grown in Canada

Production Last Year Was Valued At Over \$14,000,000

In certain sections of Canada the climate and soil are eminently adapted to fruit growing, and the Atlantic Valley, the Niagara Peninsula and the Okanagan districts are world's famous centers of fruit production.

Experimental shipments of apples from the Annapolis Valley were first made in 1861, but up to 1890 the annual production of apples by Nova Scotia rarely exceeded 100,000 barrels. After that there was a pronounced increase in acreage and production until 2,000,000 barrels were harvested in 1931. Last year 1,500,000 barrels were produced.

In Ontario, where the commercial production of all varieties of fruit has reached its highest development, the orchards have been grown about two centuries, but commercial orcharding has developed only during the last 40 years. The building of railways made the industry possible.

In British Columbia commercial production of fruit is comparatively recent in origin, growth in production having been particularly rapid since 1910. The acreage of fruit orchards expanded from 6,000 to 43,000 acres.

Last year the farm value of Canadian fruit production was over \$14,000,000. Half of this was due to apples, with strawberries second at about \$2,000,000, and raspberries third at over \$1,000,000.—Canada's Weekly, London.

Longevity Of Newspapers

Few Business Firms Can Show Equal Continuity Service

Robert P. Holliday, New York newspaper advertising representative, has every confidence in the future of the newspaper. "In this country to-day there are 280 newspapers more than 100 years old, and 1,000 papers are daily," he says. "I defy you to find 280 drug stores, grocery stores, department stores or hotels that are more than 100 years old."

Canada's newspapers are daily," he says. "I defy you to find 280 drug stores, grocery stores, department stores or hotels that are more than 100 years old."

Canada's newspapers are daily," he says. "I defy you to find 280 drug stores, grocery stores, department stores or hotels that are more than 100 years old."

Would Be Shortage

If every bachelor in Canada, between the ages of 20 and 35, were to get up his mind to marry but failed that he would not enter into consensual life unless the young lady was a Canadian or at least a resident of Canada, and providing also that all the young ladies in Canada between these same ages were willing to go around.

Although we pay a premium for fresh eggs, the world's most highly priced eggs are those of a domestic hen, estimated to be at least 75,000 years old.

North-western University co-eds at Evanston, Ill., are expressing their indignation against Japan for its invasion of China by displaying silk stockings for cotton hose. Here are four of the leaders in the movement which girls are hoping will spread to other schools.

Freedom In England

Britain Has Been Called The Cradle Of Freedom

In the full meaning of freedom generally recognized in Canada? In the recent municipal elections in London for members of the County Council a Fascist candidate pulled out 27 votes. Not a single Fascist candidate was returned by any of the 29 boroughs, and only one Communist.

Mentioning this, The Ottawa Journal trusts that Canadians, and more particularly a certain type of Canadian, will note it well. For it carries a tremendous lesson. The attention called to the result of the 29 boroughs, and only one Communist.

Mentioning this, The Ottawa Journal trusts that Canadians, and more particularly a certain type of Canadian, will note it well. For it carries a tremendous lesson. The attention called to the result of the 29 boroughs, and only one Communist.

Proposal Is Made To Build A Scientific Station In The Arctic Archipelago

Old Advice Still Good

Doctor Tells How To Prevent Or Cure A Cold

With the approach of winter, its winds and frigidity, Dr. Robert A. Crook, chief medical director of the New York Life Insurance Co., issues a bulletin on "colds" which contain a lot of common sense suggestions, but also reveals how little we really know about the nature and cause of the most common of all disorders.

Dr. Crook admits that while most observers today "regard the cold as caused by infection from a 'filterable virus'" others think the colds are caused by chilling of the body which lowers the surface temperature, and permits germs normally present on mucous membranes to get in their dirty work; and still others consider a disturbance of the heat regulation of the body a factor.

However, the doctor is more concerned with prevention and cure than with cause, and he says that to avoid sniffles and accompanying symptoms it is well to get lots of exercise, eat as healthily as possible, plenty but not too much, dress sensibly, change from wet clothing to dry as soon as possible, and avoid constipation, taking long walks, keep away from sudden changes in temperature, and from people who may have colds.

If you do catch a cold, take a hot bath, go to bed, drink plenty of water and fruit juice and rest. Stay away from the doctor's family, and let the doctor prescribe the proper medicine.

When children catch cold, always have a physician; it may not be a cold, but the exposure.

A proposal the Dominion government build up maintain a scientific station in the Arctic Archipelago has been presented to the department of mines and resources.

Departmental officials have in no matter under consideration and will probably discuss it with leading scientists interested in Arctic exploration before advising Hon. T. A. Cresser, minister responsible for the Northwest Territories.

So great was the desire demonstrated by Canadian, British and United States scientists to drive into the secrets of the north during the past summer that it is argued the Dominion should lend it aid by providing a series of visits to various times could operate. Ten expeditions into the north last summer in addition to the one of the entire Arctic party of the R.M.S. Nanisivik.

The site proposed for the station is on the northern coast of Baffin Peninsula, most northerly outpost of the continent. It would be placed on the northern coast of Baffin Peninsula, most northerly outpost of the continent. It would be placed on the northern coast of Baffin Peninsula, most northerly outpost of the continent.

The plan will likely be submitted also to British and United States scientists, who have well as active activity in supporting Arctic expeditions in the past.

Major's campaign's peering in the north magnetic pole very slightly from year to year, a phenomenon known as the magnetic pole move. A station in the vicinity would be able to verify this.

Before a site could be fixed by the Dominion government, it would have to be settled. One of the chief handicaps in exploring the Arctic region in the past has been the short season in which ships can ply among them.

In the season to a station near the centre of the group, well supplied with food, fuel, and other necessities, their work would be greatly facilitated.

Naturally the Dominion government views with favor scientific expeditions to the Arctic islands of Great Britain and the United States. Canadian scientists and their researches are shared with Canada.

Hindu Scientist Dead

Famous Scientist Killed By A Storm Of Criticism In Scientific Circle

Jagadisa Chandra Bose, 79, Hindu scientist, who stirred up a storm in scientific circles in 1931 with his "heart beat" theory of plants, died at Dacca, India, yesterday, of a heart attack.

When he presented his theory of the identical nature of physiological reaction in plants and animals to the British Royal Society, there were allegations he was not the first to discover the electric response of ordinary plants. The society at first rejected his paper but later recognized his claim of priority and conferred a fellowship upon him.

Appealed To Human Side

Jan Smuts Persuaded Welsh Miners To End Strike

Mr. Jan Smuts, eminent South African and Empire statesman, showed himself to be a good salesman during the period of the Great War, and was much used by Lloyd George as such. Once Mr. Smuts was sent to Wales to persuade striking Welsh miners to return to work.

The British navy had only one week's supply of coal and it looked as if it would have to quit the job, with unthinkable danger to the cause of the allies. The Welsh miners were in a very ugly mood when Smuts faced them. Looking at the absurdity for a minute or so, Smuts said to them, "I have heard much about Welsh singing. I wonder if you will sing for me?"

After a long minute, a mine began "Land of Our Fathers," and then the huge country took up the song. The miners left them, and they listened to Smuts with sympathy. They went back to work.

"I suppose that most good men would feel parallel stories of how they broke down opposition by finding out the human side as against the business side of the buyer."

A. B. COOK
JEWELER AND OPTICIAN Second St., Medicine Hat

Mr. Cope, Inspector for the Board of Industrial Relations of Alberta, was in Medicine Hat last Tuesday evening to explain the male Minimum Wage Act and Hours of Labor recently made effective. A number of merchants and manufacturers were present at the meeting from Redcliff.

Remembrance and Peace Service Premier Aberhart who is an adept at manufacturing slogans has coined a new one which is: "I am for a square deal for everyone." When one looks back over the last year and a half and recalls the number of efficient and faithful government employees who have been put out of their positions and replaced them by "I C" supporters, the wonder is that Mr. Aberhart himself did not give the old faithful employees "a square deal."

International Good Will

Impressive Ceremony Held At The Peace Arch At Vancouver

One of the most impressive demonstrations of international good will that has ever been held in Vancouver was the Peace Arch ceremony at the Peace Arch at Blaine, erected on the international border to commemorate the hundred years of peace between Canada and the United States which was the occasion of the Quebec Women's Institute. It took place during those tense days when we marvelled at the dignity, poise and silent grief of the women of the Orient, whom we saw watching with straining eyes the headlines of the daily papers telling of the war between their countries.

I can see little Mrs. Tessa Gault-lett standing under the simple sign which bore two tiny flags, one Canadian and one American, permanently fastened back and forth with this inscription above: "Children of a Common Mother." "May These Dates Never Be Forgotten."

Her brief simple speech might have been a prayer for peace. She was followed by Miss Victoria Chen of China who said so feelingly "There is no place in the world I rather stand, than under a peace arch."

I think that we Canadian and American pilgrims were relieved fully the significant inscription on the Canadian side of the arch: "Whither Dwellers Together in Unity" until we heard the national anthem which includes the first verse of "God Save the King" and "My Country 'Tis of Thee" and a new third verse:

"Two empires by the sea,
Two nations great and free,
Our anthem raised
Our race of ancient fame
Our tongue, our faith we claim
Our God, whose glorious name
We live and praise."

Menace To Sheep

Deer Harmless In Daytime Becomes Killers At Night

Canada sheepmen have an apparently perpetual problem in maintaining animals which attack their flocks and annually destroy thousands of dollars worth of valuable breeding stock. In pioneer days it was wolves and bears from which the settlers had to protect their stock and even today in some parts these animals are still occasionally dangerous. But the more recent offenders are deer, mostly of a "Dr. Jehu" and Mr. "Honey" nature which, trusted home guardians and loved companions in the daytime, become sheep killers at night.

Over in New Zealand they have another menace to their sheep flocks in addition to deer. In years gone by pigs have escaped from the farms of settlers and the wild boars on the pioneer frontiers, and making refuge in the dense bush that covers much of the inland portion of the islands, have increased in numbers. Their usual food is roots and berries, but they have acquired a liking for the flesh of young lambs, and in times of scarcity they invade settled territory in bands, causing considerable damage. To help settlers who are complaining of the depredations of these wild hogs the Government has declared them outlawed and is offering a shilling a head for every wild pig killed.

A Pretty Good Trick

If One Figures Out How It Could Be Done

An instructor in the Harvard Psychological Laboratory has made himself into a human radio receiving set by filling one ear with salt water. Inserting a bit of wire into the water and strapping a second piece of wire to another part of his body. Musical programs came in clearly, but the recipient could not distinguish the announcements, which, of course, is a break in itself. This arrangement is undoubtedly a good trick if you can do it, but so far we haven't been able to figure out how the performer keeps the water in his ears. —New York Times

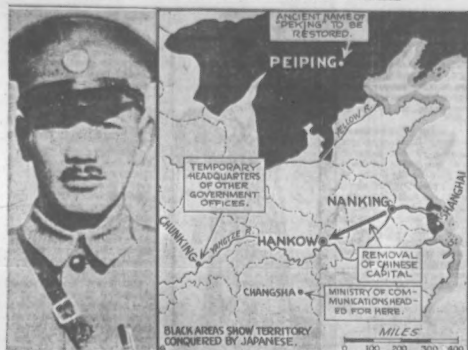

It has been shown that cadmium, a metal well known only to chemists and metallurgists, when substituted for tin in babbitt is useful in bearings and will operate at temperatures up to 570 degrees Fahrenheit satisfactorily.

After Forty Three Years

The hour of breaking the flag over the British House of Parliament has been changed from 11 a.m. to 2 p.m. to comply with the rule for other public buildings. The later hour has been adhered to for 43 years.

We couldn't do without newspapers. So many want to know what it was they heard over the radio.

JAPANESE ADVANCE FORCES REMOVAL OF CHINA'S CAPITAL

The rapid advance of Japanese armies on Nanking, capital of China, forced the removal of the government offices to Chungking, 300 miles west toward the interior. The Communications Department transferred to Chungking, as did the Ministry of Education, and other departments set up temporary headquarters at Chungking, as on this excellent map. Meanwhile Gen. Chiang Kai-shek (left) has resigned the presidency of the Executive Council to take active charge of the defense forces.

People Like To Be Gay

Scientists Prove Laughter Is More Common Than Tears

Science is proving numerous victories these days. Only a few weeks ago it was established by actual laboratory test that men perspired when the room temperature rose above a certain point, and shivered when it dropped below another level—something which none of us had previously suspected. Now science has proved conclusively that human beings prefer to be gay rather than miserable. In the latter case, however, we register a slight advance over accepted and traditional knowledge. We are given the precise proportion of laughter to tears.

Our ridiculists, it seems, are tickled 400 times as often as our tear ducts are stimulated. Perhaps that supplies the scientific explanation of why this column is more often cheerful than sad, or tries to be, at any rate. Unconsciously one offers merchandise on the principle that the customer is always right.

It is Professor Paul Thomas Young of the University of Illinois Psychology Department who has measured the tears and the laughter. He has been conducting studies among the students on his campus and thinks his conclusions would hold good for other and older folk; he traces the emotional extremes to environmental and social factors and not to physical disturbances among the subjects. It may be that the more or less protected college student laughs a bit more frequently than his father or mother, but little less inclined to worry or hunt trouble. But the 400-to-1 ratio leaves plenty of margin to establish the trend.

Professor Young found that college students cried less than one in every twenty days, but laughed more than twenty times every day. Weeping was caused 80 to 90 per cent. of the time by environment. But laughter was evoked 88 per cent. of the time by social contacts. As would be expected in college, the chief source of the joy or gloom was class grades. Letters received or not received, especially those containing checks from home, ranked second. "Dates" as an element of their tumult quite a way down the list, settling into tenth place.

In these tests men proved more consistently cheerful than women. The ladies weep three times as often and failed more frequently to see the comic side of the life around them. The percentage of persons who laugh a bit more at the men than the men did at them.—New York Times

Got Them Both In

The principal of an Ontario high school asked the pupils in first form to give him a sentence using the words "handsome" and "rascally". One bright pupil wrote:

"The town sat on the sewing machine. So tall and grave and handsome. Till he got new stitches in his tail. And then you bet, he rascally."

Canada's Gold Production

According to Marketing, Toronto, in 1931 Canada had 50 gold mines, and by the end of this year 141 mines will be in operation. There are now 128 mines at work, and 18 under construction. The estimated value of output for this year is \$147,000,000.

Although the population of Australia is less than 7,000,000, the continent is almost as large as the United States.

Definition Of Farmer

Editor Has Found Out How Much This Name Covers

The Chicago Daily News says when the president, at the polls recently, gave his occupation as "farmer," the Journal of William T. Del. was surprised. Its editors had thought, somewhat naively, that a farmer was a man who lived and worked on a farm. Then they looked it up, and here is what they found:

"Farmer—one who farms; as, one who takes taxes, customs, excises or other duties, to collect, paying a fixed sum for the privilege; as, a farmer of the revenue. One who leases the lot and crop of the crown. A cultivator of ground as a steward or tenant. One who tills the soil; one who conducts or manages a farm; an agriculturist; a husbandman; a stock farmer. A leaser; as, One who agrees to perform certain duties for a fixed sum; one who agrees to take the care of or to keep . . . papers."

By-Products From Coffee

Coffee grounds will help Germany save foreign exchange. A factory is being built in Berlin to extract fat and resin from nine tons of grounds collected daily from hotels and other establishments. Treated with benzine, grounds yield 12 per cent. fat and eight per cent. wax and resin. The fat is used to make soap. The refuse left will replace sawdust.

THE LORD MAYOR'S COACHMAN

This gorgeous personage is always a highlight of the Lord Mayor's Show in London, and in the 1937 presentation was as impressive as ever when Sir Harry Trefor was sworn into the office made famous by Dick Whittington.

Black Hat Springs

Have Been Famous For Their Medical Qualities For Over Fifty Years

For over fifty years the hot mineral springs of Black Hat have been famous for their medical qualities. In fact it was the discovery of these springs in 1883, which led to the settlement of an area of ten square miles surrounding them as a National Park. This was the beginning of the system of National Parks of Canada which now occupies more than 15,000 square miles.

The fame of the hot sulphur springs still attracts health seekers from all parts of the globe. In the last fiscal year more than 90,000 visitors to Black National Park took advantage of the opportunity to bathe in the health-giving waters of the springs, an increase of 15,000 over the preceding year. During the seven-month period, April 1, 1937, to October 31, 1937, the springs were patronized by 80,732 persons.

The hot springs of Black Hat among the most radio-active waters in the North American continent and have acquired a world-wide reputation by reason of their curative properties. There are five main springs in all—the Upper springs, the Kidney springs, the Middle springs, the Lower springs, and the Upper springs. The Kidney and Middle springs have not yet been developed, but the other three are in use. The Upper springs are situated on the shore of the lake, and the Middle and Lower springs are situated on the shore of the lake.

The man who made a fortune out of a piece of wood and length of string arrived in London recently. He is Louis Marx, American toy manufacturer. It was Mr. Marx who set half the world apoplectic. Mr. Marx did not invent it. Yo-Yo is something like two hundred years old and is still a weapon of war in the Philippines Islands. It was when a friend of Mr. Marx told him a couple of Filipinos were amusing the guests at a California hotel with their antics with a piece of wood and a bit of string that Mr. Marx flew by air to California from his New York office, says the Daily Star.

But even Mr. Marx, who as one of the leading toy manufacturers in the States, decided to market the Philippine weapon of war did not guess how far his Yo-Yo "dog" would spread. Within a few months the little toy was being manufactured in millions and sent all over the world. Altogether 40,000,000 Yo-Yos were sold.

By Remote Control
A young Toronto school teacher has recorded his proposal of marriage for remote control presentation to his girl friend in far-off Australia. Officials of a commercial recording company were astonished when he recorded his love, saying among other things: "Just close your eyes and imagine I'm kissing you. She is going to mail the disk, then, and mail it."

Quebec Padlock Law
Quebec's padlock law, permitting the attorney-general to padlock premises used for the propagation of Communism, is viewed with "gravel" by the speaker in the Dominion cabinet, Gratien O'Leary, associate editor of the Ottawa Journal, said at a meeting of the Ontario branch of the Canadian Liberties Union at Montreal.

"This padlock law violates every principle of the law," said the Ottawa editor. "It is not anti-Communist; it is aimed against Britain. In Ottawa there are but the grave magnifying glass on the consequences of this act."

Since Magna Charta, British subjects have been assured their freedom of thought, speech and press. The government of Premier Maurice Duplessis has arbitrarily curtailed freedom of speech and freedom of the press through the law. "In its essence, it is the Fascist touch, it shows the Nazi heart," said Mr. O'Leary.

Under the padlock legislation, the attorney-general could padlock homes where libraries contained copies of Karl Marx or other Socialist writers. The speaker recalled H. H. H. Bennett, a Dominion Conservative leader, had recently said he had been reading writings of John Strachey, a Socialist author. The Quebec law, said Mr. O'Leary, was "making a criminal out of a man who was Canada's prime minister."

Though there were things about Communism and Fascism he heartily detested, the speaker said, he must insist on the right of their proponents to express their opinions, provided they did not advocate violence "against the rest of us" in carrying out their aims.

Freedom of the press must be preserved. Newspapers must remember, however, they had a duty. They must fight for the liberty of the individual, or the individual would not fight for freedom of the press.

Red paper is used by Mexicans to flavor their chocolate drink.

The smallest herd of all predatory animals is that of the Sun.

The oak tree is preyed upon by more than 500 insect pests.

Charger Is Changing

Arctic Eskimo Has Different Outlook Now Status Report

Contact with white traders changes the outlook of the Eskimo in Canada's Arctic regions, and gradually things which might be regarded as the incentives of civilization, come to be regarded as necessities. A Royal Canadian Mounted Police report indicates.

As an illustration, the annual report of the R.C.M.P. cites an incident which came to the notice of a patrol on the coast of Baffin Island. The patrol travelled on the Cumberland Sound, north to Jivik in Davis Strait.

At Palled the constables visited a party of Eskimo who had spent the winter there and heard of the incident which illustrated the changed attitude of the natives who had come to look on the traders as their provider and to make demands upon him instead of providing for themselves by hunting as their forebears did and as the more primitive natives still do.

"Too-pee," the head man of the natives would say to the trader at Pangnirtung that his people were starving and were eating their dogs," said the report.

"The messenger carried 15 white fox pelts with a note from the head man demanding such things as chewing gum, blankets, sugar and ammunition in exchange for the pelts. The note, written in Eskimo syllable, read up by myself: 'If you cannot send these things do not send anything at all.'"

The charges attached to the specific articles demanded is that, unless the natives had a very adequate stock of goods, they would be forced to trade. If they were asked about being self-sustaining, he asked for food instead of blankets, and said: 'If you cannot send these things do not send anything at all.'"

Auto Racing
Nothing To Be Gained By Big Speeds That Are Not Profitable.

Sir Malcolm Campbell, who has driven his racing automobile to the record speed of a mile a minute, 80 miles an hour, is reported to have retired. He will never, nor his mechanic, says, drive a racing automobile again. Sir Malcolm did not fancy the prospect of crowding his luck. In any case, his mechanic said, his automobile and his were definitely established.

There is no gain to us in the knowledge that an automobile can be built and speeded 300 miles per hour. The speed is not practical, and, except for occasional purposes, it is not needed. Sir Malcolm's record will one day be broken, but without profit to civilization.

Our grandmothers doubted that man would ever attain, via his mechanical achievements, a speed of 300 miles an hour. There are few automobile drivers to day who have not driven a car that fast, or faster. We have seen what the price is, in part. The need in transport now is not for more speed, but less; not for greater speed, but for greater safety. So ought we to resolve.—Portland Oregonian

Makes Them Self-Supporting
Vermont Women Help Crippled Children To Learn Useful Work.

Mrs. Eugene Rhodes of Woodstock, Vermont, is a firm believer in the principle that every crippled child has the right to not only care, treatment and education, but also to such training as will fit him or her for self-support, wholly or in part.

For twelve years Mrs. Rhodes has been in charge of "Vermont Handicrafts," the work of the crippled children's division of the Department of Public Health. She has been in the business for seven of 7 to 70 throughout the State, tries to discover what kind of work individual is capable of doing, to instruct all of them in methods of performing the work, brings them ideas for designs, keeps the completed articles for standardized quality and arranges for sales.

Carried 55,515 Passengers
During the first ten months of this year, the Queen Mary carried 55,515 passengers in a record-breaking voyage by H. P. Borg, general passenger manager of Cunard White Star.

Her average was 2,500 per round trip, giving her a total of about 600 more than was carried by any trans-Atlantic liner for the same period.

Philharmonic orchestras get their names from the Greek, which means "loving harmony."

It takes about 35,000 bees to bring in one pound of honey.

A Timely Warning

List Of Messages To Prevent Carbon Monoxide Poisoning

At low a concentration as 25 parts of carbon monoxide in 10,000 parts of air is sufficient to cause death in from three to 10 minutes, Dr. Gordon Jackson, M.O.H., Toronto, warns in his latest monograph against accidents in connection with "the invisible death."

"The chief source of carbon monoxide is probably the burning of gas, which, according to life insurance companies, is responsible for more than 80 per cent. of the deaths attributed to gas poisoning," he states in his report to the board of health.

"The practice of warming up motor engines while the garage doors are closed, and its often fatal result, is an every-day occurrence," he went on. "Motorists who persist in this are actually tempting death."

To prevent carbon monoxide poisoning, he listed the following warnings:

- (1) Never run motor indoors without opening garage doors.
- (2) Never sit in car for prolonged periods with windows closed and motor running.
- (3) Never get under a car, the motor of which is left running.
- (4) Keep radiator fan-type heaters closed when travelling slowly, or if following closely behind other cars.
- (5) Have carburetors adjusted for complete combustion, rather than for pick-up and power.
- (6) Never use rubber hose connections on gas appliances.

Emergency treatment for carbon monoxide victims:

- (1) Remove the patient quickly to the open air. Speed is essential.
- (2) Send for medical aid at once.
- (3) If breathing is stopped or feeble, at once start artificial respiration.
- (4) Keep patient in recumbent position, and apply heat when possible.

To Retain Land Fertility

Alberta Municipal Convention Wants Trees Planted On School Land

Mention of drought's encroachment upon sections of Alberta now free from it was seen by delegates to the annual convention of the Alberta Association of Municipal districts. Resolutions aimed at constructive measures to retain land's fertility was adopted.

Drought and dust storms are becoming prevalent each year, and the drought belt is working its way northward, bringing with it increased pestilence, each year, one resolution said. As adopted it asked the government to adopt constructive measures immediately to save the land, asked the department of education to instruct school children in protection of kind life, and urged that remaining school lands be not sold but, instead, be used for tree growth.

It was urged also that farmers with 10 or more acres of bush on any quarter-section be encouraged to retain that bush and that the area be exempt from tax on it. A companion resolution said that, because soil-drilling is becoming prevalent on some lands still classed as arable, and since no tag reductions have been offered as inducement to leave such lands seeded in grass, the government should make tax-exempt arable lands which are placed in grass for periods of from three to five years, with details of the plan to be left in the hands of the local crops commissioner.

MATHSON WILL WELCOME PATTERN OF SLENDERIZING

By Anne Adams

C/A 4006

A model for "obese" is this flattering wash and knit! Women with enthusiasm for doing things with Pattern 4006 because it's designed for action, is easy to make, and can be stitched up in no time! You'll be delighted, too, with the slenderizing effect of the unusual yoke-panel (cut all in one) styled skirt, and handy all-way pockets. Take your choice of long or short sleeve, part-way or fully round hem, V-neckline or perky pointed collar—all equally smart and becoming. Anne Adams recommends a bright splash of contrasting ribbon for accent. Ideal in slugs.

Pattern 4006 is available in women's sizes 24, 26, 28, 30, 32, 34, 36 and 40. Size 32 takes 2 1/2 yards 36 inch fabric and 3 yards ric-rac braid. Illustrated step-by-step sewing instructions included.

Send twenty cents (20c) in coin or stamps (cash preferred). For this Anne Adams pattern. Write plainly Blue Name, Address and Style Number and send order to the Anne Adams Pattern Dept., Winnipeg Newspaper Union, 170 McDermott Ave. E., Winnipeg.

British Immigration

Excess Of Settlers Coming To Canada Over Those Returning To Britain

An indication the flow of emigrants from the United Kingdom to Canada and Australia was resumed to some extent in 1934 was given by figures in a written reply by the Dominion Secretary to a question asked in the House of Commons. In 1934 the number of emigrants to Canada over migration from Canada to the United Kingdom was 7,326. The excess to Australia was 1,596.

Testing Gyroplanes

Experiments to test the qualities of modern gyroplanes—aircraft lifted by rotating wings—in naval and military service will be carried out in Great Britain early next year. Work is going ahead on five "jumping" autogyros ordered by the air ministry.

Home Makers Need Help

Make Plans For Bettering Homes And Conditions For Children

Home-makers of Canada need help to discover, accept and perform wisely the great task of creating better homes and developing a better people. Esther Thompson, convener of the committee on household economics of the Federated Women's Institute of Canada, said in submitting her report to a F.W.I. board meeting in Toronto.

Outlining a plan for this needed inspiration, information and encouragement, Miss Thompson suggested formation of a council of provincial directors and superintendents of women's institute work. The council and the F.W.I. of C. would co-operate, the Federation of Women's Institutes adopting and carrying out the plans of the council for bettering homes and conditions for children.

This would involve approaching the federal department of agriculture and laying a foundation for such work as was carried out at Washington in the United States department of agriculture for the extension departments in the 48 states.

Low Birth Rate

Decline In Births Is Cause Of Worry To Australia

Prime Minister Joseph Lyons says Australia is "losing" more lives in a single year as a result of the decreasing birth-rate than it lost in the four years of the Great War.

He made the statement in connection with the federal government's campaign to restore the birth-rate to its former level and to stimulate immigration from Great Britain.

As an initial move, the government plans to approach authorities at the Home Office to request that the number of British immigrants be increased. Under this system, residents of Australia could nominate their friends and relatives. During the period from 1929-30, the nomination plan was in effect and 224,000 assisted immigrants were introduced into Australia.

The Australian birth-rate, 27.26 per 1,000 in 1931, last year had fallen to 37.15 per thousand.

Position Is Secure

No Danger Of Porters Being Helped By Hostesses

With the advent of hostesses on railway trains comes also the prediction that the Pullman porter with his spick and span, his toothy grin and his "Yamah, loo!" will soon be as extinct as the buggy whip.

Don't believe it. As long as travelling saloons fill the rails and as long as congenially inquisitive guests still congregate in the smoker, there always will be a Pullman porter lurking somewhere around, say the Kitchener Record.

Hostesses may be "chick" and they may have "personality" poured in the roads' adjectives. But you couldn't slip half a dollar into one of their palms and get that upper 12 changed magically into a lower seven.

And when a bright-eyed young hostess poles her head into the berth to announce, "Thirty minutes to Montreal, sir," then that will be going too far. The porter still has his place on trains.

The rhinoceros is related to the horse.

Health

LEAGUE OF CANADA presents TOPICS OF VITAL INTEREST

By DR. J. W. S. McCULLOUGH

ARTICLE NO. 18

Prospect For The Cancer Patient

A former president of the United States was found by his doctor to have a small round spot the size of a quarter dollar on the roof of his mouth.

Microscopical examination revealed the presence of cancer. The member of his upper jaw was promptly removed in an impromptu hospital established on a vessel in New York Harbour. Within a month the President of the nation had been fitted with an artificial jaw and had delivered an important message to Congress.

President Hoover would still have been another case 15 years later. It was not until after this first case that the public learned for the first time that the head of the nation had been ill or that he had had an operation.

The astounding success in the treatment of cancer by surgery, its cure in certain areas by means of X-rays and radium; the determination of government, medical and hospital authorities and of voluntary organizations to conquer the disease, lend courage to the victims of cancer and relieve the sensation created by its seeming prevalence.

The greatest obstacle to the cure of cancer is delay in diagnosis and treatment. This delay is deplorable. McCarthy the pathologist in the Mayo Clinic, says that 20 to 30% of cancers of the breast, 45% of cancers of the large intestine and 75% of those of the stomach, seen in that clinic, are inoperable. In spite of the delay, the American College of Surgeons had collected authentic evidence of nearly 30,000 cases of cancer cured for periods of five years and upwards.

The fact that for general education in disease of all kinds are better than at any former period. The prospects for the cure of cancer were never so bright. No disease, with the possible exception of tuberculosis, has created such an atmosphere of interest; no single one is so much discussed in public.

There is a curious lethargy and apathy in the minds of most persons concerning this malady; such persons regard a diagnosis of cancer as a verdict of death. Such a view is all nonsense. There must be on all hands a will to conquer cancer, a will that has done so much to conquer smallpox, diphtheria, typhoid fever, malaria, cholera, tuberculosis and the plague. Cancer is no longer a hopeless disease.

Next article: "The World's Biggest News Story!"

Editorial Note: Readers desiring the complete set of Dr. McCullough's cancer articles at once may secure same by writing to: The Health League of Canada, 185 Bond St., Toronto, Ont.

Now cellophane-wrapped to keep it factory fresh. With the easy-opening ribbon for your convenience.

PLUG SMOKING TOBACCO

WORLD HAPPENINGS BRIEFLY TOLD

Tell Taylor, 61, author of the toll of the famous ballad "Down by the Old Mill Stream," died suddenly of a heart attack in Chicago.

Rev. Frederick W. Goodman, episcopal archbishop of Alaska, paying his first visit to the temperance tent in seven years, preface his life in the Arctic to all the boys of civilization.

Chinese residents of Saskatoon have forwarded \$500 for refugees from China's war zone. The collection was made by the Chinese Committee for National Salvation.

The British government has contributed \$5,000 (\$26,031) to the International Red Cross at Geneva for use on behalf of victims of the Spanish civil war.

The Marquess of Londonderry has donated a carved representation of the royal coat of arms, made from Quebec pine, to St. John's church in Seaboard Harbor, N.B.

Walking on city streets while under the influence of alcohol has been declared a "danger to traffic" and a punishable offence in Magdeburg, Germany.

Edmonton will be the scene of the next biennial convention of the Federated Women's Institutes of Canada. It was decided at the final session of the federation's board meeting in Toronto.

United States Customs agents seized 300 ounces of narcotics, valued at \$19,500, aboard the incoming liner Berengaria. The contraband was found in a false bottom of a trunk owned by a third class passenger.

Young Bob Exhibit

Effies Declares Exhibit In Paris Gallery First Class

Paris has discovered a Monet of the palette. At the age of eight years Gerard Ringer has on exhibition in a large Paris gallery a selection of water colors and drawings which the critics unanimously term first class. Gerard Ringer received no instruction; his natural instinct approaches that of Dufy and Matisse.

Gerard Ringer has never seen the sea, yet his marines are among his best work.

The gem of the exhibition is his sketch scene among high mountain peaks. The faithfulness of his drawing, the harmony of his white tones and the movement of the skier arouse astonished admiration of the spectators.

Most curious is that Gerard Ringer has neither the appearance nor the tastes of an infant prodigy. His appearance, his habits, are those of a little boy indistinguishable from many others. Also, far from spoiling his gift by fattening his precocity, his advisors have wisely decided to let his talent develop naturally under patient and persevering labor.

Colds, diphtheria, measles, and scarlet fever, in the order named, are the four most common diseases.

Among the first implement of magicians were clubs and balls, and Chinese rings.

All British civil aircraft was seized motors.

Fastest Trains

Nine Fastest Trains In The World Operate In Germany

Railway speeds have been raised in almost every country in the world during the past few years, although the present record undoubtedly goes to a German Diesel train running between Berlin and Hannover, a distance of 156 miles in 115 minutes, giving an average of 82.3 miles per hour.

As a matter of fact, the slowest trains in the world are German, all at rates of over 77 miles per hour. The fastest regular run in the United States is the Pennsylvania between Valparaiso and Plymouth, a distance of 46.2 miles at an average of 75.6 miles per hour, the time taken being 35 minutes.

The fastest British train is the London and North Eastern "Coronation" express between London and Edinburgh—392 1/4 miles at an average of close to 73 miles per hour, with one stop at York. A British railway, the London, Midland and Scottish, makes the world's longest non-stop run between London and Carlisle, a distance of 299 miles. The full journey to Glasgow is 401 miles in six and one-half hours.—St. Thomas Times-Journal.

The vanished people of Easter Island, 2,000 miles west of Chile, were egg-eaters. They chose their rulers by egg gathering contests, in which the winner became king. They lived in egg-shaped huts.

Meteorites are the only things from another world that we can touch and feel.

The test of good manners is to put up pleasantly with one.

THE STORY OF FLIN FLON STARTS IN NEXT ISSUE

It will be well worth your time to read how this mine was found—and what it means today to Manitoba and Saskatchewan, because nearly 600 residents of these provinces are employed.

As a record of mining effort from 1881 onward in the West, and a personal visit this summer to Flin Flon, the story is worth preserving. Over 50 photographs were taken for this story.

**Canada Studies of
Old Country Market**

he Experts Visited British Isles
Last Summer

A story of neglected opportu-
nities for the sale of Canadian
agricultural products in the Uni-
ted Kingdom market is told in a
highly informative report issued

by the Dominion Minister of
agriculture, Hon. James G. Gor-
diner. The report reveals the
results of an intensive study of
the Old Country market - which
was conducted last summer by a
group of Canadian agricultural
experts who visited the British
Isles with A. M. Shaw, recently
appointed Director of Marketing
Service for the Dominion Depart-
ment of Agriculture.
